**Subject:** Extraction Well #7 at Dico

A well contractor was at Dico today to start work on extraction well #7 to resolve the issue with low flow.

The extraction well was shut off at approximately 12:15 PM today. The pump, pump motor, and piping were removed from the well casing. The well screen was cleaned mechanically using a well screen brush. The pump, pump motor, piping, and meter have a significant amount of buildup on them so the well contractor has taken them back to his facility for removal of the buildup and cleaning.

After these well components have been cleaned, they will be brought back to Dico, reassembled, placed back into the well casing, and the well will be restarted.

After extraction well #7 is back in operation, work will begin on extraction well #6 to resolve the issue with low flow. I will keep you updated on the progress made to resolve the issue with low flow on extraction wells #6 and #7.
